Notion template · Version Oct 2026

Welcome

Track income and spending, keep budgets in check automatically, save toward goals and keep every subscription in view.

What's inside

Transactions	Every income and expense, one row each.
Budgets	Monthly limit per category — spending fills in automatically.
Goals	Savings targets with live progress.
Subscriptions	Recurring costs with a monthly equivalent.
Visual Analytics	Income, expenses and net for this month, last month and two months ago.

Get started in 5 minutes

1 Duplicate the template
Open the template link from your delivery email. Click the ··· menu (top right) and choose **Duplicate** / **Duplicate to my workspace**. Work only in your copy.

2 Clear or keep the examples
Every database ships with a few example rows so you can see how things connect. Look through them, then delete them (select rows → Delete) or overwrite them with your own data.

3 Favourite the page
Click the star (☆) at the top so the template sits in your sidebar. On mobile, it then appears under Favourites.

4 Create your budgets
In **Budgets**, add one row per spending category (e.g. Groceries, Dining, Transport) and enter a **Monthly Limit**.

5 Log your first transactions
In **Transactions**, add a row with name, **Amount** (always positive), **Type** (Income or Expense), **Category** and **Date**.

6 Link expenses to a budget
For each expense, set the **Budget** relation to the matching budget row. That is what feeds the budget's **Spent** number.

7 Add goals and subscriptions
Enter **Target** and **Current** for each goal; enter **Amount** and **Billing Cycle** for each subscription.

> **Good to know:** fields with a formula or rollup fill in by themselves — you never type into them. If one shows empty, the linked data (relation, date or amount) it needs is missing.

How it works

Transactions

- **Amount** is always a positive number. **Type** decides whether it counts as money in or out.
- **Signed Amount** turns expenses negative automatically — this powers the Net figure in Visual Analytics.
- **This Month Spend** shows the amount only if the row is an expense dated this calendar month. Budgets add these up.
- Use the **New** button on mobile for quick entry — logging a purchase takes under 10 seconds.

Budgets (automatic)

- **Spent** = sum of linked expenses dated in the current month. It resets by itself when a new month starts.
- **Remaining** = Monthly Limit − Spent. **Used %** shows how much of the limit is gone.
- **Status**: 🟢 Healthy under 80%, 🟡 Watch from 80%, 🔴 Over above 100%.
- Only expenses linked via the **Budget** relation are counted. Income never counts toward a budget.

Goals

- Update **Current** whenever you save money toward a goal. **Progress %** calculates itself.
- Add a **Deadline** to keep the goal time-bound.

Subscriptions

- **Monthly Equivalent** converts yearly plans into a monthly cost, so you can compare everything fairly.
- Untick **Active** when you cancel — keep the row as a record.
- Keep **Next Payment** current so nothing surprises you.

Visual Analytics

- Three tabs: This Month, Last Month, 2 Months Ago — each with Income, Expenses, Net and an Income vs Expense chart.
- Everything is calculated from Transactions; there is nothing to fill in here.

Your routine

Daily (1 min)	Log what you spent today.
Weekly (5 min)	Check budget Status. Anything 🟡 or 🔴? Adjust spending for the rest of the month.
Monthly (10 min)	Review Visual Analytics, update goal balances, check Subscriptions for anything to cancel.

Pro tips

- Name transactions consistently ("Groceries — Edeka") so search and filters stay useful.
- Create a budget called "Other" so no expense goes untracked.
- Not financial advice — the template organises your numbers, decisions stay yours.

FAQ

Which Notion plan do I need?	The free plan runs everything essential. Some view types (e.g. Charts) have limits on free plans; all core databases and formulas work without upgrading.
Can I rename or add properties?	Yes. If you rename a property that a formula or rollup uses, Notion updates the reference automatically. Deleting such a property breaks the formula that depends on it.
What currency is used?	Amounts are plain numbers, so any currency works. If you want a symbol, open the property → Number format → pick your currency.
Something isn't working?	Email info@templyworks.com with a screenshot. We fix setup problems quickly.
