Templyworks

BUNDLE GUIDE · 3 TEMPLATES

Solo Ops

Your money, your work, your brain — all in order.

templyworks.com · info@templyworks.com

Notion template · Version Oct 2026

Welcome

Three Notion templates that run the parts of your business nobody else sees. This guide starts with how the three work together, followed by the full guide for each template.

What's in your bundle

Finance HQ	Money in and out, automatic budgets, goals and subscriptions.
Project Tracker	Projects, tasks and time with automatic progress, health and billable totals.
Second Brain	Capture everything, sort it with PARA, keep ideas and processes in one place.

How they work together

1. **Daily**
   Capture ideas and notes into **Second Brain → Inbox**. Work from **Project Tracker → Due This Week** and log your hours. Log spending in **Finance HQ**.
2. **Weekly**
   Process the Inbox (PARA), check project **Health**, check budget **Status**.
3. **Monthly**
   Review Visual Analytics in Finance HQ, compare logged vs quoted hours, archive finished projects, turn repeated work into SOPs.

> **Where to start:** Set up in this order: Finance HQ budgets (5 min), Project Tracker with your current projects, then start capturing into Second Brain.

Each template has its own link in your delivery email — duplicate all three into your workspace. The full guide for each template follows on the next pages.

Notion template · Version Oct 2026

Welcome

Track income and spending, keep budgets in check automatically, save toward goals and keep every subscription in view.

What's inside

Transactions	Every income and expense, one row each.
Budgets	Monthly limit per category — spending fills in automatically.
Goals	Savings targets with live progress.
Subscriptions	Recurring costs with a monthly equivalent.
Visual Analytics	Income, expenses and net for this month, last month and two months ago.

Get started in 5 minutes

1 Duplicate the template
Open the template link from your delivery email. Click the ··· menu (top right) and choose **Duplicate** / **Duplicate to my workspace**. Work only in your copy.

2 Clear or keep the examples
Every database ships with a few example rows so you can see how things connect. Look through them, then delete them (select rows → Delete) or overwrite them with your own data.

3 Favourite the page
Click the star (☆) at the top so the template sits in your sidebar. On mobile, it then appears under Favourites.

4 Create your budgets
In **Budgets**, add one row per spending category (e.g. Groceries, Dining, Transport) and enter a **Monthly Limit**.

5 Log your first transactions
In **Transactions**, add a row with name, **Amount** (always positive), **Type** (Income or Expense), **Category** and **Date**.

6 Link expenses to a budget
For each expense, set the **Budget** relation to the matching budget row. That is what feeds the budget's **Spent** number.

7 Add goals and subscriptions
Enter **Target** and **Current** for each goal; enter **Amount** and **Billing Cycle** for each subscription.

> **Good to know:** fields with a formula or rollup fill in by themselves — you never type into them. If one shows empty, the linked data (relation, date or amount) it needs is missing.

How it works

Transactions

- **Amount** is always a positive number. **Type** decides whether it counts as money in or out.
- **Signed Amount** turns expenses negative automatically — this powers the Net figure in Visual Analytics.
- **This Month Spend** shows the amount only if the row is an expense dated this calendar month. Budgets add these up.
- Use the **New** button on mobile for quick entry — logging a purchase takes under 10 seconds.

Budgets (automatic)

- **Spent** = sum of linked expenses dated in the current month. It resets by itself when a new month starts.
- **Remaining** = Monthly Limit − Spent. **Used %** shows how much of the limit is gone.
- **Status**: 🟢 Healthy under 80%, 🟡 Watch from 80%, 🔴 Over above 100%.
- Only expenses linked via the **Budget** relation are counted. Income never counts toward a budget.

Goals

- Update **Current** whenever you save money toward a goal. **Progress %** calculates itself.
- Add a **Deadline** to keep the goal time-bound.

Subscriptions

- **Monthly Equivalent** converts yearly plans into a monthly cost, so you can compare everything fairly.
- Untick **Active** when you cancel — keep the row as a record.
- Keep **Next Payment** current so nothing surprises you.

Visual Analytics

- Three tabs: This Month, Last Month, 2 Months Ago — each with Income, Expenses, Net and an Income vs Expense chart.
- Everything is calculated from Transactions; there is nothing to fill in here.

Your routine

Daily (1 min)	Log what you spent today.
Weekly (5 min)	Check budget Status. Anything 🟡 or 🔴? Adjust spending for the rest of the month.
Monthly (10 min)	Review Visual Analytics, update goal balances, check Subscriptions for anything to cancel.

Pro tips

- Name transactions consistently ("Groceries — Edeka") so search and filters stay useful.
- Create a budget called "Other" so no expense goes untracked.
- Not financial advice — the template organises your numbers, decisions stay yours.

FAQ

Which Notion plan do I need?	The free plan runs everything essential. Some view types (e.g. Charts) have limits on free plans; all core databases and formulas work without upgrading.
Can I rename or add properties?	Yes. If you rename a property that a formula or rollup uses, Notion updates the reference automatically. Deleting such a property breaks the formula that depends on it.
What currency is used?	Amounts are plain numbers, so any currency works. If you want a symbol, open the property → Number format → pick your currency.
Something isn't working?	Email info@templyworks.com with a screenshot. We fix setup problems quickly.

Licence: personal and business use, including work for your own clients. Reselling or redistributing the template is not allowed. Digital product — all sales are final once delivered (you agreed to immediate delivery at checkout). Statutory rights for defective content remain unaffected.

Notion template · Version Oct 2026

Welcome

Projects, tasks and time in one system — progress, health and billable totals calculate themselves.

What's inside

Projects	Every engagement with automatic Progress, Health and hours.
Tasks	Work broken into phases, with overdue flags.
Time Log	Every hour you work, billable or not, with amounts.

Get started in 5 minutes

1 **Duplicate the template**
Open the template link from your delivery email. Click the ··· menu (top right) and choose **Duplicate** / **Duplicate to my workspace**. Work only in your copy.

2 **Clear or keep the examples**
Every database ships with a few example rows so you can see how things connect. Look through them, then delete them (select rows → Delete) or overwrite them with your own data.

3 **Favourite the page**
Click the star (☆) at the top so the template sits in your sidebar. On mobile, it then appears under Favourites.

4 **Create a project**
In **Projects**, add the project with **Client**, **Phase**, **Start Date**, **Due Date** and **Quoted Hours**.

5 **Break it into tasks**
In **Tasks**, add tasks, link each to the **Project**, and set **Phase**, **Due Date**, **Priority** and **Est. Hours**.

6 **Log your time**
In **Time Log**, add an entry per work session with **Hours**, **Date**, **Project**, **Rate** and whether it's **Billable**.

> **Good to know:** fields with a formula or rollup fill in by themselves — you never type into them. If one shows empty, the linked data (relation, date or amount) it needs is missing.

How it works

Projects (automatic)

- **Progress** = share of linked tasks marked Done.
- **Logged Hours** = sum of Time Log hours for the project. Compare with **Quoted Hours** to protect your budget.
- **Billable Total** = sum of billable time entry amounts.
- **Health**: ✓ Done when Completed · 🔴 Overdue after the due date · 🟡 At Risk when hours exceed the quote or the deadline is within 7 days and progress is under 75% · 🟢 On Track otherwise.

Tasks

- Phases: Discovery → Design → Review → Delivery.
- **Overdue** flags any task whose due date has passed and isn't Done.
- Views: **By Phase** kanban for daily work, **Due This Week** for focus.

Time Log

- **Amount** = Hours × Rate, only when Billable is ticked.
- Log time the same day — memory gets expensive by Friday.

Views

- **By Status** board: projects grouped by Not Started / In Progress / Completed, with Health and Progress on each card.
- **Timeline**: start-to-due bars for deadline planning.
- **By Client**: table sorted by client with all numbers.

Your routine

Daily (2 min)	Open Due This Week, pick today's tasks, log time when you finish.
Weekly (10 min)	Scan project Health. Any 🟡 or 🔴 — talk to the client early, not late.
At project end	Set Status to Completed, compare Logged vs Quoted Hours, use it to price the next job.

Pro tips

- Quote in hours first, then price — the Logged vs Quoted comparison will teach you your real speed.
- Log non-billable time too (admin, revisions) so you see where time really goes.

FAQ

Which Notion plan do I need?	The free plan runs everything essential. Some view types (e.g. Charts) have limits on free plans; all core databases and formulas work without upgrading.
Can I rename or add properties?	Yes. If you rename a property that a formula or rollup uses, Notion updates the reference automatically. Deleting such a property breaks the formula that depends on it.

SETUP & USER GUIDE

Second Brain

Your second brain — finally organised.

templyworks.com · info@templyworks.com

Notion template · Version Oct 2026

Welcome

Capture anything fast, sort it with the PARA method, keep ideas separate and document the processes you repeat.

What's inside

Inbox	The lowest-friction place to capture anything.
Ideas Vault	Business, template, content and product ideas.
SOPs	Step-by-step processes you repeat.
PARA Reference	Projects, Areas, Resources, Archive explained.

Get started in 5 minutes

1. **Duplicate the template**
   Open the template link from your delivery email. Click the ··· menu (top right) and choose **Duplicate** / **Duplicate to my workspace**. Work only in your copy.
2. **Clear or keep the examples**
   Every database ships with a few example rows so you can see how things connect. Look through them, then delete them (select rows → Delete) or overwrite them with your own data.
3. **Favourite the page**
   Click the star (☆) at the top so the template sits in your sidebar. On mobile, it then appears under Favourites.
4. **Capture five things**
   Add five items to **Inbox** right now — articles, notes, tasks, anything. Just a title is enough.
5. **Do your first sort**
   For each item set **PARA**, add **Tags** and a one-line **My Summary**, then tick **Filed**.
6. **Move ideas over**
   Anything that is an idea rather than a note goes into **Ideas Vault** with Status Raw.
7. **Write one SOP**
   Pick a task you do often (e.g. invoicing) and write its steps in a new **SOPs** page.

> **Good to know:** fields with a formula or rollup fill in by themselves — you never type into them. If one shows empty, the linked data (relation, date or amount) it needs is missing.

How it works

Inbox

- **Date Saved** fills in automatically when you create an entry.
- Capture first, organise later. Speed beats structure at capture time.
- Tick **Review This** for items you want to revisit; tick **Filed** once sorted — it leaves the Inbox view.

PARA method

- **Projects** — has a deadline and an outcome (e.g. client website, launch).
- **Areas** — ongoing responsibility with no end date (Finance, Health, Marketing).
- **Resources** — reference material by topic you want to find later.
- **Archive** — finished or inactive. Move here, don't delete.

Ideas Vault

- **Date Captured** fills in automatically.
- Status: Raw → Developing → Ready, or Shelved when it's not for now.

SOPs

- **Last Updated** changes automatically whenever you edit an SOP.
- Set **Owner / Delegate To** once someone else can run the process.
- Mark **Needs Update** when a process changed but the page didn't yet.

Your routine

Anytime	Capture into Inbox — phone or desktop.
Weekly review (15 min)	Open Inbox (not Filed). Give each item PARA, Tags and a summary, tick Filed. Skim Ideas Vault and move anything exciting from Raw to Developing.
Monthly	Archive finished projects, review SOPs marked Needs Update.

Pro tips

- Write My Summary in your own words — that is what makes notes useful later.
- Any process you repeat more than three times deserves an SOP.

FAQ

Which Notion plan do I need?	The free plan runs everything essential. Some view types (e.g. Charts) have limits on free plans; all core databases and formulas work without upgrading.
Can I rename or add properties?	Yes. If you rename a property that a formula or rollup uses, Notion updates the reference automatically. Deleting such a property breaks the formula that depends on it.
